

Xerox Lisp includes utilities for generating hardcopy in "Press" format. This is a file format for communicating documents to Xerox laser xerographic printers of the Press, Spruce or Fullpress class, which are known by the names Dover, Penguin, Raven and Spruce.

Note: Press, along with other classes of printers, is described fully in two sections in the *IRM*, "Hardcopy Facilities" and "Fonts."

The reason for putting this document into the *Lisp Library Modules Manual* is that support of these printers is no longer an integral part of the system.

Requirements

FONT.S.WIDTHS
PUPPRINT.LCOM
A Press print server

Installation

Load PRESS.LCOM from the library.
Set the variable PRESSFONTWIDTHFILES (see below).

User Interface

You can use the usual means:
HARDCOPY in background (right-button) menu,
HARDCOPY in FileBrowser menu, or
functions typed into the exec window (see below).

Functions

DEFAULTPRINTINGHOST	[Variable]
PRESSFONTWIDTHFILES	[Variable]
SEND.FILE.TO.PRINTER	[Function]
LISTFILES	[Function]

(All: see the *IRM* for full details.)

Limitations

PRESS does not support NS characters or NS fonts.
